Workshop on Automating Workflows with LLMs – IEI TCET X OpenAI IoT

Event: IEI TCET x OpenAI Workshop on Automation of Workflows using LLMs

Date & Duration:

Date	Time	Mode	Duration
10-07-2026	3:30-5:30 PM	Seminar Hall - III	2 Hours

Participants: 79 Students [ST CSE (IoT) and TT BTech IoT]

Objectives:

- Introduction to LLM Basics: Understand the core concepts of Large Language Models and their role in technology.
- Demonstrate Automation: Learn how to use AI to automate manual tasks and business workflows.
- Bridge the Skills Gap: Connect classroom theory with practical, industry -standard AI applications.
- Align with Industry Trends: Expose students to current real-world applications.

Faculty Present: Mr. Sunil Khatri (Faculty Incharge, IEI), Dr. Sujata Alegavi (Faculty Incharge, Open AI)

Speaker: Dr. Loukik Salvi (Assistant Professor, Computer Engineering Department)

Description:

The workshop on "Automation of Workflows using LLMs" was organized by the IEI TCET student chapter and the OpenAI IoT club. The event began with a comprehensive introductory session delivered by Dr. Loukik Salvi, who walked the audience through the fundamental mechanisms of how large language models operate.

The speaker explained how LLMs work, Explaining the audience the technical operations and processing methods that take place behind a functioning AI model. During this time, attendees actively engaged with the presented concepts, generating an ongoing dialogue and discussing the general workflow of LLMs to grasp the system's capabilities and understand how these models manage data inputs.

Engineers (India)

Followed by the speaker session, a live demonstration of an LLM was also conducted. A speaker guided participants through the step-by-step installation process required to set up language models locally, using a working model of a resume screener demonstrated in real-time.

The event concluded with a formal vote of thanks delivered by a student representative to all the faculty members present, the representative also highlighted how the knowledge gained during the session would be highly applicable in the upcoming future, as local workflow automation becomes an essential skill in modern engineering and industrial environments.

SWOT Analysis:

Strengths:

- The session provided a strong conceptual base with direct audience interaction and Q&A.
- Showcasing a live, working model (Resume Screener) that helped student understand this topic faster

Weaknesses:

- Limited session duration restricted detailed discussion of all planned activities.
- Packing model architecture, setup, and practical automation workflows into one session overwhelmed beginners.

Opportunities:

- The success of the demo paves the way for extended workshops where students build their own pipelines.
- Successful Live Demonstration will be helpful attract new student registrations and increase official memberships for club.

Threats:

- Low student participation may reduce the effectiveness of planned activities.
- Scheduling conflicts with academic commitments may affect event attendance.

5W1H Analysis:

What	Who	Where	When	Why	How
Workshop on Automation of Workflows using LLMs	Organizers: IEI-TCET And Open AI IoT Participants: ST CSE (IoT) Students	Seminar Hall-III Online (Teams)	July 10th, 2026 From 3:30 PM to 5:30PM	To help Students learn about LLMs(Large Language Models)	Through presentations, interactive discussions, and a Live demonstration of a LLM

Feedback:

How Confident Do You Feel About Using LLMs To Automate Workflows After Attending This Workshop?

Was The Pace Of The Workshop Appropriate?

Did The Speaker Explained The Concepts Clearly?
